Self-motivated and hardworking. Looking for an opportunity to work in a challenging IT environment to prove my skills and put my knowledge & intelligence to use for company's growth.

Experience:

I have completed a wide range of tasks from python course and manuals. I have a project on git. It is a card game called "durak". I used several main python libraries for it: PyGame, OS, Random and time. My main personal achievement that I built smart bots for this game.

There are several areas that I have improved while working on this project:

- Object oriented programming
- Working with main python libraries
- Working with a big project

In fact, the assignment from the python course was much easier, but I decided to challenge myself and do something more complicated.

Other skills:

- Strong communication skills
- Creative
- Quick learner
- Hardworking
- Open-minded
- Team player
- Reliable
-

Education:

- 2007 - 2011, Donetsk National Technical University (DonNTU) Bachelor degree, power stations

Courses:

- English courses of "English Planet" Kyiv, Ukraine. 2018-2020, from A2 to B2
- Python courses of "Udemy", (online), the name of the course "From zero to hero", 2021 – 2022.

Additional information:

I enjoy challenges, there were enough jobs where I came up with basic knowledge about and, eventually I learned how to solve complex issues. I was put to solve them by myself with some googling and intelligence. One of those jobs is my current job. Before the manager sent me to courses of professional development of service maintenance my boss had discovered that I have quite the potential. So now I am the one of two certified specialists in Ukraine in this sphere in my country. Those courses were quite expensive so I had some obligations, due to the contract that I had signed. Currently the contract has already run out, so here I am, looking for new opportunities in IT field.
